**Priority number(s):**

**Abstract of JP4352783**

**PURPOSE:** To provide the subject new compound having antitumor action.

**CONSTITUTION:** The compound of formula having the following physiological properties. Aerobic; liquefaction of gelatin, positive; coagulation of defatted milk, negative; peptonization of defatted milk, positive; hydrolysis of starch, positive; formation of melanin-like pigment, negative; composition of menaquinone, MK-9 (H<sub>6</sub>, H<sub>8</sub>). It has the following physical and chemical properties. Appearance, white powder; melting point, 72-76 deg.C; mass analysis, EIIMS spectrum m/Z 566(M<+>); molecular formula, C<sub>31</sub>H<sub>50</sub>O<sub>9</sub>; molecular weight, 566; specific rotation, [alpha]<25>=20.0 (C=0.1, methanol); solubility, easily soluble in methanol, chloroform, acetone and ethyl acetate, scarcely soluble in n-hexane, insoluble in water; etc. The compound of formula can be produced by culturing Streptomyces hygroscopicus A-9561 (FERM P-12223) under aerobic condition, extracting the culture liquid with acetone and extracting the extract with ethyl acetate.
